Technical Program

Issues related to on-line testing are increasingly important in modern electronic systems. In particular, the huge complexity of electronic systems has led to growth in reliability needs in several application domains as well as pressure for low cost products. There is a corresponding increasing demand for cost-effective on-line testing techniques. These needs have increased dramatically with the introduction of very deep submicron and nanometer technologies which adversely impact noise margins, process, voltage and temperature variations, aging and wearout and make integrating on-line testing and fault tolerance mandatory in many modern ICs.

The International On-Line Testing Symposium (IOLTS) is an established forum for presenting novel ideas and experimental data on these areas. The symposium also emphasizes on-line testing in the continuous operation of large applications such as wired, cellular and satellite telecommunication, as well as in secure chips. The Symposium is sponsored by the IEEE Computer Society Test Technology Technical Council and organized by TIMA Laboratory, INESC-ID, and University of Piraeus.

About the location: Sesimbra is a tiny fishing village in a sheltered bay overlooked by a Moorish castle that also encloses a 12th century church and affords wonderful views from its ramparts. In the old town is a 17th century fort overlooking the sea, a good starting point for a scenic walk before hitting the beach that, although crowded in the summer, has unpolluted waters ideal for swimming. In late afternoon the fishing boats return and there's a fish auction on the dockside. That same fresh fish can be sampled at one of the several restaurants along the shore. A short drive or a 30-minute bus journey from Sesimbra leads to windswept Cabo Espichel, quite a mystical and eerie cape. The views of the coast and ocean are stunning, with cliffs dropping almost vertically several hundred feet into the Atlantic. In such a dramatic and pristine setting, it is not surprising that large dinosaur footprints were found nearby on Lagosteiros Beach.

About the Venue: IOLTS 2009 will be held in Sesimbra Hotel & SPA, one of the Finest Resorts of the area. The hotel is located in a long beach with warm and calm waters 30km south of Lisbon. Portugal's capital is famous for its monuments, museums and rich cultural life. Although it boasts a range of must-see sights, its biggest pleasures are its streetlife and setting, admired from a pavement cafe or simply by wandering around the atmospheric old quarters.

Social Program: The irresistible call of the sea takes us to the submarine wonders revealed by Apnea, a boat with the hull in glass that the French Joseph Bridel operates with his son, François Bridel. Five years ago they created the Aquarama company, purchased this "floating submarine" and launched into the sea in the wonderful coastline of Sesimbra. The Apnea is different and special due to its transparent hull that provides panoramic views of the ocean depths. The cruise departs from "Porto de Abrigo", in Sesimbra, and goes to "Praia do Inferno" (the beach of Hell), before "Espichel" Cape. There are three small rooms on the ground floor, where you can dive in the Atlantic without even wetting the feet. After all, is this view, below the waterline, that distinguishes the Apnea of other cruises.
